OVERVIEW:

The MF5 MIFARE® read/write module is designed for fast integration into portable, stationary readers or payment system etc. The typical reading range of the module is up to 60mm depending on the antenna and TAG. Also printed circuit board antennas are supported for MF5SK Start Kit. The OEM read/write module was designed for simple integration. The Serial TTL-interface can be directly connected to microprocessors and easily converted to the RS232 serial interface device. The GNetPlus protocol is like industry MODBUS RTU. We also support the ActiveX Control and easy to control the MF5 module, The ActiveX Control can be using any terminal program (VB, VC++...etc) without writing a single line of code for communication.
